

MEETING MINUTES — FINAL (v11)

Virtual Office (VO) System — Meeting with Levi Jan Clavesillas

July 16, 2026 · Microsoft Teams · Reconciled against Whisper transcript + client clarifications (18 Jul 2026)

Field	Detail
Date	July 16, 2026
Duration	Approx. 1 hour 5 minutes
Basis	Teams recording (Whisper AI transcript) + v1 minutes + client answers
Version	v11 (FINAL) — Flow 4 (payment tracking) + precursor added; all 4 flows complete
Status	For sign-off & development

⚠️ How to read this document

- 👤 Green = plain-language context for the Project Owner.
- 💻 Blue = technical requirements for the Developer.
- ⚠️ Amber = a decision / clarification agreed in the meeting.
- 🔴 Red = a **CHANGE / correction from the v1 minutes (something was wrong or missing)**.
- ★ Two global rules apply across the **WHOLE** system — see Section 0A.

0. SUMMARY OF CHANGES SINCE v1 MINUTES

The v1 minutes were accurate on the core workflow but had gaps in the role model, the commission-split feature, and the reporting/targets scope. The confirmed corrections are:

#	Area	What changed
1	Designations	CORRECTED: base role is SA (Sales Associate). SAM = Sales Assistant Manager (a manager role), SM = Sales Manager, SD = Sales Director. v1/v2 wrongly used "SAM" for the base associate.
2	Role permissions	SAM and SM carry employee-level feature access. Only Admin and SD hold elevated rights.
3	Commission split	Submitting associate (Associate 1) can assign split amounts to Associate 2 and Associate 3. Blank = 0; unassigned commission stays with Associate 1.
4	Sales targets	Employee view now includes a monthly quota and YTD sales (dollar value + transaction count) from 1 Jan. Visibility scoped by role.
5	Team membership	An associate can belong to multiple teams; team reporting shown as overall/aggregate at associate level.
6	Team creation	Admin-only team-creation module (was missing from v1 entirely).
7	Recruitment access	Invite candidate = SAM and above (SAM, SM, SD, Admin). SA excluded.
8	Digital namecard	Confirmed already live on the system — no action required.

0A. GLOBAL RULES (APPLY SYSTEM-WIDE)

⚠️ ★ Rule 1 — Percentage or absolute, 2 decimal places

Every value field in the system (commissions, splits, company profit, quotas, product amounts, overrides, etc.) must accept EITHER a percentage OR an absolute amount, entered to a maximum of 2 decimal places.

⚠️ ★ Rule 2 — Everything is audited

All workflow steps, all approvals, and all system/data changes must be written to the audit log and be viewable there. The audit log remains Admin-only for viewing.

💻 Developer — Technical Requirements

- Provide a shared numeric input component: mode = {percentage | absolute}, precision = 2 dp, with validation and consistent storage (store both the raw value and the mode).
- Audit log must capture: actor, role, action, entity, before/after values, timestamp — for submissions, SD approvals, admin approvals, auto-approvals, product/master edits, team creation, quota changes, partner approve/reject, and any config change.
- Auto-approval events (e.g. SD 3-day auto-approve) must be logged as system-actor entries.

1. ROLE MODEL & DESIGNATIONS (CORRECTED)

▲ CORRECTION — designations

v1/v2 used "SAM" for the base associate. That is WRONG.

The base role is SA (Sales Associate). SAM = Sales Assistant Manager, which is a manager-level role. Full set below.

👤 Project Owner — What this means

There are five roles. Only Admin and the Sales Director (SD) can do special approval things.

The Sales Assistant Manager (SAM) and Sales Manager (SM) log in and see the same working tools as a normal Sales Associate (SA) — the extras a manager gets are the ability to recruit and a wider view of their team's numbers (Section 6).

Code	Title	Access level	Defining right
Business Admin	System Administrator	Full	All system admin rights; final approval for commission payout
SD	Sales Director	Elevated	Approves submissions; auto-approves if not actioned within 3 days
SM	Sales Manager	Employee-level	Employee tools + recruit + team breakdown reporting
SAM	Sales Assistant Manager	Employee-level	Employee tools + can invite candidates
SA	Sales Associate	Employee (base)	Submit product, generate invoice, view own targets/namecard

💻 Developer — Technical Requirements

- RBAC tiers for feature gating: Admin > SD (approval) > {SM, SAM, SA} at employee tier. SM and SAM grant NO extra feature access vs SA — parity except recruitment and reporting scope.
- Recruitment (invite candidate) = SAM and above (SAM, SM, SD, Admin). SA excluded.
- Reporting scope (Section 3) is the main role-based differentiator among the employee-tier roles.

2. PRODUCT SUBMISSION — COMMISSION SPLIT (NEW / CONFIRMED)

▲ CHANGE FROM v1 MINUTES

v1 did not document the Associate 1 / 2 / 3 split mechanism at all. This is now confirmed.

Project Owner — What this means

The person who submits the sale is "Associate 1" (the primary associate) and, by default, earns the full closing commission.

On the submission form they may choose to share part of that commission with up to two others — "Associate 2" and "Associate 3".

Any amount they give to Associate 2 / 3 is deducted from Associate 1's share.

If Associate 2 and/or 3 are left blank, that portion counts as 0 and simply stays with Associate 1 (the submitting associate) for that month's payout.

Confirmed rule

"The other person" the unassigned commission shifts to = Associate 1 (the submitting / primary associate). If nothing is split, Associate 1 keeps the full closing commission.

Developer — Technical Requirements

- Add three commission fields to the transaction-submit form: Associate 1 (auto = submitting associate, default full closing commission), Associate 2 (optional), Associate 3 (optional).
- Associate 1 defaults to the full closing commission and is auto-populated. Associate 1 total = closing_commission - (assoc2_amount + assoc3_amount).
- Associate 2 / 3 blank ⇒ treated as 0; residual remains with Associate 1. No reallocation to any external party.
- Persist the split against the transaction for the SD split-approval step and for month-end payout. Log who received what to the audit log.
- Associate 2 / 3 inputs follow Global Rule 1: percentage OR absolute amount, up to 2 decimal places.

3. SALES TARGETS & AMOUNT (NEW / CONFIRMED)

CHANGE FROM v1 MINUTES

v1 omitted sales targets entirely. Now confirmed as part of the employee view, with role-scoped visibility.

Project Owner — What this means

Every associate can see a Monthly Quota (their target for the month) plus their Year-to-Date (YTD) sales — shown as both a dollar value and a transaction count — counted from 1 January of the current year.

The monthly quota is set for them by their team Manager and/or Director — the associate does not set their own. If both set a value, the Director's value overrides the Manager's.

An associate can belong to more than one team; at associate level, team figures are shown as an overall/aggregate. What each person can see widens up the ladder (own self → own team(s) overall → whole division).

Who sees what

Role	Can see
Sales Associate (SA)	Own self + own team(s)' overall (aggregate) data. No individual breakdown of teammates.
Managers (SAM / SM)	Same as SA + a breakdown of all of his/her own team(s)' data (drill into individuals).

Role	Can see
Director (SD)	Same as manager + all of his managers' data (every team beneath the director).

Developer — Technical Requirements

- Add a monthly quota field per associate, settable by Manager and/or Director. Director value overrides Manager value on conflict (log both + who set which).
- YTD = running total from 1 Jan of the current calendar year (reset annually), shown as \$ value AND transaction count.
- Support multi-team membership per associate; aggregate team figures at SA level, individual breakdown at SAM/SM level.
- Scope: SA = self + team aggregate; SAM/SM = self + team individual breakdown; SD = all managers + their teams. Enforce server-side.

4. TRANSACTION, INVOICE & APPROVAL WORKFLOW (RESTATED)

Project Owner — What this means

When an associate submits a sale, an invoice can be generated immediately — no approval needed for the invoice. Separately, an approval chain runs for the commission payout only: the team's SD approves the split, then Admin approves the uploaded agreement documents before commission is paid.

Key decision (confirmed, unchanged from v1)

Invoice generation = immediate, automatic, no approval gate. Approval workflow = commission payout only. Two independent processes.

Developer — Technical Requirements

- On submit: auto-generate invoice, downloadable immediately; not blocked by any approval.
- Agreement document upload is MANDATORY on transaction submission.
- Approval chain: Associate → SD (verifies split) → Admin (verifies documents). SD auto-approves after 3 calendar days of inaction.
- Installment plans: 12-month or 24-month options selectable at submission. First month = deposit/booking fee (+ optional first installment).
- Installment tracking (marking each month paid) is Admin-only and manual for now; associate sees invoice + paid/unpaid status only.

5. ROLE-BASED ACCESS MATRIX (CORRECTED)

Columns use the corrected designations: SA (Sales Associate, base) · SAM (Sales Assistant Manager) · SM (Sales Manager) · SD (Sales Director) · Business Admin. A full grouped RBAC control matrix (all modules) is in the companion VO RBAC Matrix document.

Feature / Page	SA	SAM	SM	SD	Bus. Admin
Submit product (transaction)	✓	✓	✓	✓	✓
Fill Associate 2 / 3 split	✓	✓	✓	✓	✓
Generate / download invoice (own)	✓	✓	✓	✓	✓
View sales targets & amount (own)	✓	✓	✓	✓	✓

Feature / Page	SA	SAM	SM	SD	Bus. Admin
Download digital namecard	✓	✓	✓	✓	✓
Notices / Documents / Partners (view)	✓	✓	✓	✓	✓
Own team(s) overall (aggregate) data	✓	✓	✓	✓	✓
Team individual breakdown	✗	✓	✓	✓	✓
Invite candidate (recruitment)	✗	✓	✓	✓	✓

Partner approve / reject	✗	✗	✗	✗	✓
Audit log (view)	✗	✗	✗	✗	✓
Product backend master	✗	✗	✗	✗	✓

6. CLARIFICATIONS — ALL RESOLVED

The open items from v2 are now closed with the client's answers:

#	Question	Resolution
1	Split input format	System-wide: any value is percentage OR absolute amount, to 2 decimal places (Global Rule 1).
2	YTD sales meaning	Show BOTH dollar value and transaction count.
3	Associate seeing team data	Yes — SA sees team overall (aggregate). An associate can belong to multiple teams.
4	Designations	SA = Sales Associate (base); SAM = Sales Assistant Manager; SM = Sales Manager; SD = Sales Director. Recruitment = SAM and above.
5	Quota authority	Both Manager and Director may set; the Director's value overrides the Manager's.
6	Auditing	All workflow, approval and system changes are logged and viewable in the audit log (Global Rule 2).

6A. WORKFLOWS

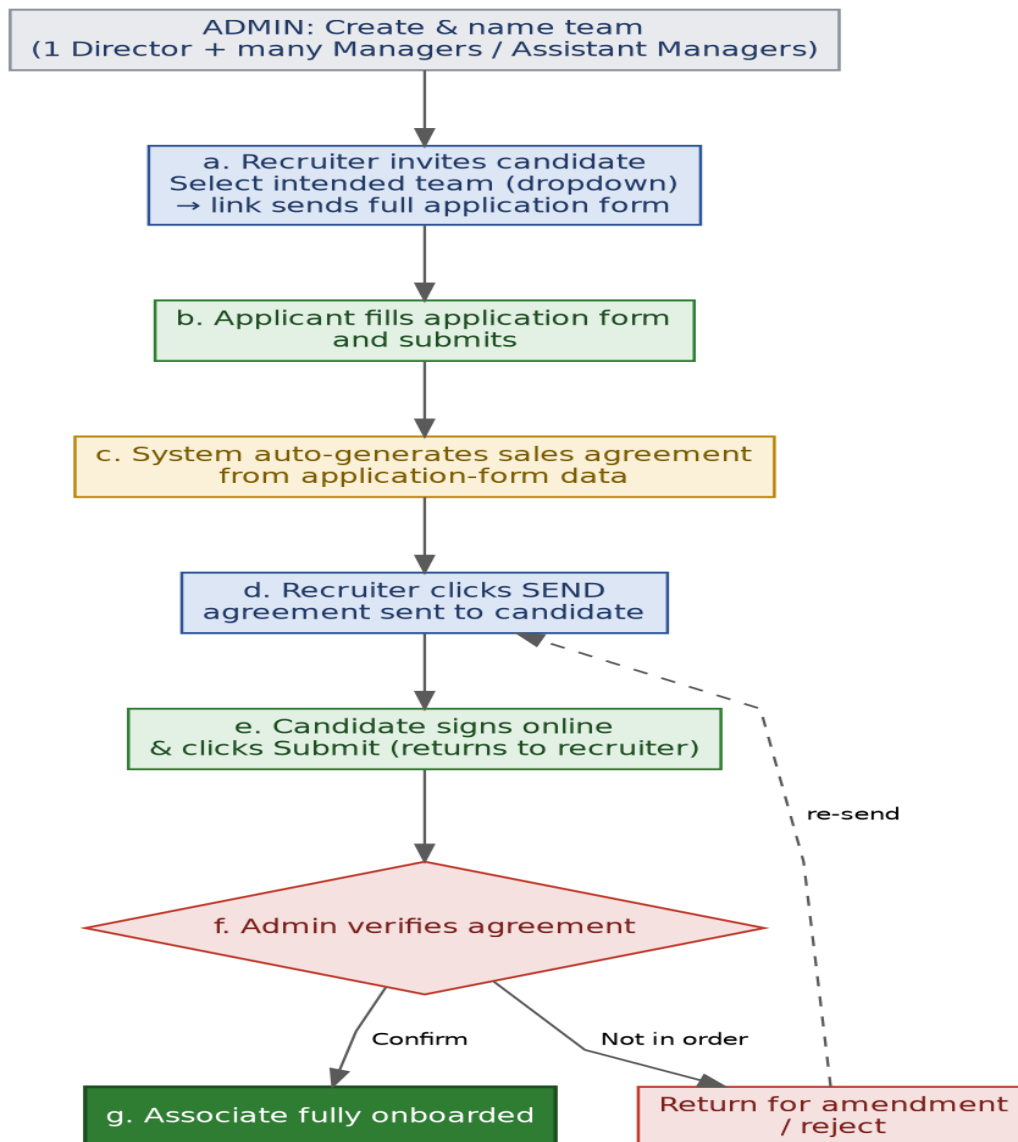

Four workflows were discussed: (1) Recruiting, (2) Product creation, (3) Product submission, (4) Payment tracking. Flow 1 is detailed below; Flows 2–4 are reserved pending the client's next update. A standalone companion document (VO System Workflows) carries the same content for the developer.

6A.1 Recruiting workflow

Setup (prerequisite)

Admin creates and names teams. Each team is headed by exactly one Director and may have many Managers and Assistant Managers.

The recruiter picks which team a candidate joins when sending the invite.

Step	Actor	Action
0	Admin	Create and name the team; assign one Director (head) + many Managers / Assistant Managers.
a	Recruiter	Invite candidate; select intended team from a dropdown; invite link sends the full application form.
b	Applicant	Fill up the application form and submit.
c	System	Auto-generate a sales agreement pre-filled from the application-form data.
d	Recruiter	Click SEND to send the agreement to the potential associate.
e	Candidate	Sign online and click Submit to return the agreement.
f	Admin	Verify the agreement and confirm (or return for amendment / re-send).
g	System	Once confirmed, the associate is fully onboarded.

⚠ Agreement gap fields — RESOLVED

Templates received (Application V-2023-07, Agreement V.2026-04). The 3 gap fields are now closed:

1. Marital Status — added to the Application form (V-2026-07).
2. Spouse conflict-of-interest (Y/N + Company + Designation) — added to the Application form (V-2026-07).
3. Commencement Date — defaults to the agreement send date; Business Admin can override with a chosen date on the invite.

Associate ID and Tier 1 / Tier 2 Manager remain system-populated from the team assignment. Updated form delivered as a separate file.

6A.2 Product creation workflow

Project Owner — What this means

Admin creates each product by keying fields (each % or absolute, 2 dp). When a % is entered, the system shows the \$ amount beside it (10% of a \$10k sale = \$1,000).

Keyed fields: Sales Amount, Closing Commission, SM Overriding, SD Overriding, Company Cut Pool. Two values are auto-calculated: Net to Closer and Company Retained.

Formulas

Net to Closer = Closing Commission - Company Cut Pool

Company Retained = Sales Amount - Closing Commission - SM Overriding - SD Overriding

Worked example — \$10k sale, 10%/5%/3%/2%: Closing \$1,000, SM \$500, SD \$300, Cut Pool \$200 → Net to Closer \$800, Company Retained \$8,200 (balances to \$10,000). Full detail in the companion Workflows document.

Resolved

Company Cut Pool %: computed on Sales Amount (all % fields use Sales Amount as the base).

Associate 1/2/3 split (Flow 3) divides Net to Closer, not gross Closing Commission.

6A.3 Product submission workflow

Project Owner — What this means

Anyone (incl. Admin) selects a product to submit. The submitter (Associate 1) is shown their commission = Net to Closer, and may split with Associate 2 & 3 (own-team dropdown; % of Net to Closer or absolute; primary auto-deducts).

On submit: an invoice is generated, and two parallel tracks run — (A) invoice payment tracking, (B) associate share-com approval: team SD (3-day auto-approve) → Admin → capture payout to associate DB for tracking + dashboard.

Confirms earlier open item

The associate 1/2/3 split divides Net to Closer, not the gross Closing Commission.

Invoice designed

A system-generated Enshrine-branded invoice was designed (Bill-To, sales associate, line items, totals, one-time/12/24-month installment plan, PayNow/bank/cheque, invoice-number reference). Full design in the companion Workflows document + standalone invoice file.

6A.4 Payment tracking workflow

Project Owner — What this means

Precursor: after the invoice is generated, the rep (associate, or his SM / SD) gets the client to sign it, selects Installment (12/24 months) or Direct payment, and uploads the signed invoice (mandatory) before submitting for tracking.

Payment tracking is Business Admin-only, covering two parts: installment and issued invoice (direct). Business Admin marks Paid/Unpaid. On Paid, commissions accrue to each associate's account and the invoice shows Payment Approved (ready to pay); otherwise Pending.

Installment is the same, but only counts as Paid — releasing commission — after the designated installment is marked Paid.

 To confirm

Installment trigger: you wrote the "tired" installment — please confirm whether commission releases after the 3rd or the final installment.

Invoice access for signing now extends to the associate + their SM + SD (chain oversight).

7. ACTION ITEMS & TIMELINE

#	Action	Owner	Due
1	Adopt updated Application form V-2026-07 (adds Marital Status + Spouse conflict); build commencement-date logic (send date + Business Admin override on invite)	Client + Developer	Next build
2	Build recruiting workflow (team creation, dropdown team, agreement gen, admin verify)	Developer	By Tuesday
2b	Implement corrected designations (SA/SAM/SM/SD) + role model	Developer	By Tuesday
3	Global: percentage/absolute (2 dp) input component system-wide	Developer	By Tuesday
4	Global: audit log covering all workflow/approval/system changes	Developer	By Tuesday
5	Add Associate 1/2/3 commission split fields to submit form	Developer	By Tuesday
6	Add sales targets (quota + YTD \$ & count) with role-scoped visibility	Developer	By Tuesday
7	Build product backend master + full approval workflow	Developer	In progress
8	Deliver prototype for testing	Developer	Tuesday
9	Deliver initial dashboard version	Developer	By Friday

Milestone	Target	Status
Workflow + corrected roles implemented	Tue, 22 Jul 2026	Pending
Prototype ready for testing	Tue, 22 Jul 2026	Pending
Core system go-live	Fri, 25 Jul 2026	Pending
Dashboard — initial version	Fri, 25 Jul 2026	Pending

Compiled from the Teams recording (Whisper transcript), the v1 assistant minutes, and client clarifications dated 18 Jul 2026. All open items resolved; this version is ready for sign-off and development.
